

Series QCTF - QCBF cylinders with integrated guide

Double-acting, magnetic, with double bearings and flanges
 ø 20, 25, 32, 40 mm

SERIES QCTF - QCBF CYLINDERS

- » Magnetic sensors can be mounted on both sides
- » QCTF: bronze bushings
- » QCBF: ball bearing guide
- » Movement and guide in one unit

The end cushioning is available in three different variants:

- A. fixed mechanical cushion (standard)
- B. with two shock absorbers located on the body
- C. with one shock absorber located central on the rear flange.

The versions B and C are suitable for handling of higher mass forces and / or when it is necessary to adjust the stroke.

These cylinders have been designed to be used in applications where space is limited. Regarding the bearings, the Slide Units are available in two versions, one with double sintered bronze bushes (Mod. QCTF) and the other with double linear ball bearings (Mod. QCBF). The QCTF version would normally be selected when the side loads applied to the slide unit are high. Mod. QCBF is suitable for fast cycles (less side load) and higher precision.

GENERAL DATA

Type of construction	guided with double bearings and double flanges QCTF = sintered bronze bushes QCBF = linear ball bearings
Operation	double-acting
Materials	body = anodized AL flanges = zinc-plated steel piston rod = rolled stainless steel AISI QCTF columns = rolled stainless steel 420B QCBF columns = hardened steel C50 seals = PU
Mounting	threaded and non threaded holes in the body
Strokes min. max	(see table)
Operating temperature	0°C ÷ 80°C (with dry air -20°C)
Speed	50 ÷ 500 mm/s
Stroke end cushioning Type A	extended stroke - fixed mechanical cushioning retracted stroke - fixed mechanical cushioning we recommend preventing the piston from striking against the end covers
Stroke end cushioning Type B	extended stroke - shock absorber retracted stroke - shock absorber
Stroke end cushioning Type C	extended stroke - shock absorber retracted stroke - fixed mechanical cushioning we recommend preventing the piston from striking against the end covers
Operating pressure	1 ÷ 10 bar
Fluid	clean air, non lubricated. If lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

STANDARD STROKES FOR DOUBLE-ACTING CYLINDERS SERIES QCTF AND QCBF

- = Type A and C Out of standard intermediate strokes available on request (strokes multiple of 5 mm)
- ✖ = Type B

Mod. QCTF and QCBF type "A"

+ = add the stroke once
 ++ = add the stroke twice

Note: for out of standard intermediate strokes (ex. stroke 35), consider the immediately higher stroke dimensions (ex. stroke 40).

In case of use of lateral ports, unscrew the related threaded caps, screw them in the front ports and tighten them up to the cylinder surface (not tighter) having care to use a proper sealer.
